### **DETAILED ACTION**

1. The following is a Notice of Allowability in response to the Amendment received on March 16, 2006. Claims 1-21 have been cancelled. Claim 22 has been amended. Claims 22-28 remain pending in this application.

### **REASONS FOR ALLOWANCE**

2. Claims 22-28 are allowed.
3. The following is an examiner's statement of reasons for allowance:

As per claim 22, the prior art of record taken alone or in combination fails to teach using term consistency to violate equality constrains wherein using term consistency involves intersecting the first interval with an inverse of a function derived from the first interval. Prior art teaches using various consistency algorithms with global optimization, such as, for example, hull consistency and box consistency (see Bliet et al., Van Hentenryck et al., Benhamou et al. and Collavizza et al. listed as pertinent prior art in the Conclusion section of current Office Action). However, said prior art does not teach that consistency involves intersecting the first interval with an inverse of a function derived from the first interval.

Claims 23-28 are allowed based on their dependency upon the allowable independent claim 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bliet et al. ("COCONUT Deliverable D1 Algorithms for Solving Nonlinear Constrained and Optimization Problems: The State of The Art") teaches a state of the art report in the field of nonlinear optimization. The following references teach various types of consistency used in interval analysis: Van Hentenryck et al., "Newton: Constraint Programming over Nonlinear Real Constraints"; Benhamou et al., "Revising hull and box consistency"; Collavizza et al., "Comparing Partial Consistencies".
